

How to Administer Eye Drops to Your Dog's Eye

- ❖ You may need to muzzle your dog as it may be painful.
- ❖ Remove any discharge around the eye with a cotton ball moistened with warm water.
- ❖ See the instructions on the bottle for dosage. Ensure all instructions are read correctly. Shake bottle if required.
- ❖ Use one hand to hold the bottle between thumb and index and place the other under your dog's jaw to support the head.
- ❖ Tilt the head back and, to prevent blinking, use your free fingers to hold the eyelids open.
- ❖ Hold the bottle close to the eye, but be careful NOT to touch the eye's surface.
- ❖ Squeeze the drops onto the eye and once the drops are in, release the head.
- ❖ Your dog will then blink, spreading the medication over the eye's surface.
